

# Treat electricity with caution

## Carelessness can lead to danger

### Ten things to keep in mind:

1. Remember to turn off the stove immediately after use.
2. Unplug electrical devices when they are not in use.
3. Replace defective electrical gadgets immediately.
4. Never put a stronger light bulb than instructed in a lamp.
5. Discard old and worn electrical devices.
6. Do not try to do what should be done by professionals.
7. Test the electric leakage protection switch several times a year.
8. Ensure that electrical devices that should be grounded, are.
9. Do not place lights near flammable materials.
10. Pay attention to labelling on electrical devices.

You are responsible for the condition of the electrical devices in your home. If you have the slightest notion that something might be amiss, seek help from a certified electrician.
